

## EVERPLAY polyurethane binder (Polystac SF138)

The polyurethane binder (Polystac SF138) was first formulated in 1985 for the binding of rubber crumb and use in the Toro-Tan system and particularly the newly developed EVERPLAY poured in place playground system.

The Polystac SF138 has been continually and consistently manufactured to the formula in either a pigmented binder in red or green for use with recycled tire rubber for a terra cotta or green pigmented surface or without pigment for use with coloured EPDM rubber granules for decorative surfaces.

The Polystac SF138 is stable to UV and will not affect the performance of the maintained EVERPLAY playground surface for warranty period as provided by EVERPLAY International Inc. and the testing to ASTM F1292 for the temperature range of -5°C to 49°C.
